

Manual DNA/RNA extraction using magnetic beads technology

Magnetic beads are a simple and reliable method of purifying genomic, plasmid and mitochondrial DNA. Under optimized conditions, DNA selectively binds to the surface of magnetic beads, while other contaminants stay in solution. Equipment necessary for this technology includes the bead purification kits, magnetic separators (stands, racks, automated systems), thermoblocks, centrifuges, pipettes, vortexes, tubes, columns, and flasks. Below you can find all the necessary devices for this easy but powerful method. With Biosan devices - confidence without compromises!

1

Reagent re-suspension and primary tube centrifugation

Upgraded

● LMC-3000
Laboratory
Centrifuge

Upgraded

● LMC-4200R
Laboratory
Refrigerated
Centrifuge

2

Sample lysis for release of Nucleic Acid

Upgraded

● TDB-120
Dry block
thermostat

● TS-100C
Thermo-Shaker
with cooling for
microtubes and
PCR plates

3

Magnetic particle binding to nucleic acid and separation from solution (Magnetic separation)

New

● TDB-120
Dry block
thermostat

MAGSORB-
16
Magnetic Rack for
Manual Nucleic Acid
Extraction

4

Wash to remove cell debris and contamination

ASSIST
pipette series

FTA-2I
Aspirator with Trap
Flask

5

Separation of Nucleic acid and Magnetic particles (Elution)

TDB-120
Dry block
thermostat

TS-100C
Thermo-Shaker
with cooling for
microtubes and
PCR plates

Upgraded

6

Recommended products for Magnetic based extraction

UVT-S-AR
DNA/RNA UV-
cleaner box

LABAQUA
BIO
ultrapure water
system

New

FVL-2400N
COMBI-SPIN
Mini-
Centrifuge/Vortex

TS-100
Thermo-Shaker for
microtubes and
PCR plates

Upgraded

MSV-3500
Multi Speed Vortex

CH 3-150
Heating and cooling
thermostat

ASSIST
pipette series

FTA-1
Aspirator with trap
flask

MPS-1
High-Speed Multi
Plate Shaker

PDS-250
DNA/RNA
Decontamination
Solution

New
